Introduction

The Smart Data and Smart Cities (SDSC) Conference is an annual international conference that brings together international experts in city analytics, GIS, digital twins, smart cities and data science from leading research institutes to discuss advances in methods and applications. It provides a forum to discuss the use data and technology to plan and shape our future cities. SDSC is the annual conference of the Urban Data Management Society, a society over 40 years old.

Overview

04

Data and data science play key role in informed decision-making for various businesses. 3D location data and 3D data analysis add more advantages for identification of problems, patterns and trends by location and time to make smarter decisions for our cities. Smart cities get benefits from data, data science, location data and analytics to provide accurate information for better decision making at local and regional scale. Sensing technologies and real time data collectors are also great tools for collecting different dimensions of data. In a smart cities era, all these data and information require appropriate collaborative and communication technologies for better management and sharing of data and information.

Event Information

This year the 8th annual SDSC conference will be held in Athens, Greece 04-07 June, 2024.

This is the first time SDSC conference has come to Greece.

This event seeks to invite cutting edge research, experience, and implementation relevant to city and infrastructure data, analytics, collaborative environments, and platforms for smarter decision making at local, national, and international levels.
